```

```
The present invention relates to novel non-naturally-occurring stem cell factor (SCF) polypeptides having an amino acid sequence sufficiently duplicative of that of naturally-occurring SCF to allow possession of hematopoietic biological activity of naturally occurring SCF. Sequences of the invention are useful for treating leucopaenia, thrombocytopaenia, anaemia and for enhancing bone marrow recovery in treatment of radiation, engraftment of bone marrow during transplantation in mammals and chemical or chemotherapeutic induced bone marrow aplasia or myeloeuppression. They are also useful for treating acquired immune deficiency in a human, nerve damage, noplasia, infertility, myeloproliferative disorder, intestinal damage in a mammal. SCF sequences are useful for preparing biologically active polymer polypeptide adduct, for enhancing transfection of early

The cDNA encoding this sequence is isolated from the 5637 bladder carcinoma cell line. The sequence is described in an invention relating to novel stem cell factors, the polynucleotides encoding them and methods for producing the stem cell factors. The methods involve increasing the number of early haematopoietic progenitor cells in human peripheral blood by administering a hematopoietically effective human stem cell factor including myelofibrosis, myelosclerosis, osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hodghin's disease, including myelofibrosis, sultiple myeloma, Hodghin's disease, humboma, Gaucher's disease, Niemann-Pick disease, refractory anaemia, malaria, vitamin B12 and folic acid deficiency, hypopigmentation disorders i.e. piebaldism and viral induced disorders, including AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          KOLKKSFKSPEPRLFTPEEFFRIFMRSIDAFKDFVVASETSDCVVSSTLSPEKGKAKNPP 180

ö
haematopoietic progenitor cells with a gene, and transfer of a gene into a mammal. They are useful for treating myelofibrosis, myelosclerosis, osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-bick disease, Letterer-Sive disease, refractory erythroblastic anaemia, Di Guglielmo syndrome, congestive splenomegaly, Kala azar, sarcoidosis, primary splenic pancytopaenia, disseminated fungus disease, malaria, military tuberculosis, Phlminating septicaemia, pyridoxine deficiency, vitamin Bl2 and folic acid deficiency, Diamond Blackfan aneamia, hypopigmentation disorders such as piebaldism, AIDS (acquired immune deficiency syndrome) and vitiligo. The present sequence is human SCF protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, stem cell factor; SCF; haematopoletic activity; infertility; intestinal damage; myeloproliferative disorder; leucopenia; thromboyvopenia; anaemia; bone marrow transplant; immune deficiency; neoplasia; nerve damage; osteoporosis; metastatic carcinoma; leukaemia; miliary tuberculosis; haematopoletic progenitor cell.
                                                                                                                                                                                                                         The present invention relates to novel stem cell factors (SCFB), polynucleotide sequences encoding the SCFB, and methods of producing them. SCFB are involved in the blood-forming (haematopoietic) system in mammals, particularly humans. The method of the invention is useful for the production of human SCP. The stem cell factors are useful to treat disorders involving blood cells e.g. metastatic carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, lymphoma, refractory erythroblastic anaemia, miliary tuberculosis, disseminated fungus disease, malaria, and vitiligo. The present sequence represents human SCF protein isolated from the 5637 bladder carcinoma cell line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MDVLPSHCWISEMVVQLSDSLTDLLDKFSNISEGLSNYSIIDKLVNIVDDLVECVKENSS 120

ADP99333
            The invention relates to stem cell factor (SCF) polypeptides with ham the polymucleotides encoding them. The perpetides are used for treating infertility, intestinal danage, polypeptides are used for treating infertility, intestinal danage, myeloproliferative disorders, leuropenia, thrombocytopenia or anamia, for improving engraftment of bone marrow transplants, for enhancing bone marrow recovery after radiotherapy or chemotherapy and in treatment of immune deficiency, neoplasia, nerve danage, osteoporosis, metastatic carcinoma, leukaemia and miliary tuberculosis. The SCF polypeptides are also used to expand haematopoietic progenitor cells for transplantation on to prepare such cells for transfection with a gene. The SCF polymucleotides can be used for recombinant expression of the polymetides and also as probes for mapping of the SCF gene, for identifying SCF-related diseases and as a marker for neighbouring genes. Antibodies raised against the polymeptides are useful in diagnosis and to remove SCF from blood. This sequence represents an SCF polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Also included is a recombinant host cell transfected with an expression construct comprising a vertebrate SCF polypeptide-encoding DNA operatively linked to a heterologous expression regulatory sequence, permitting the expression of the vertebrate SCF polypeptide in the host cell bisclosed as new are rat and human nucleic acids encoding SCF, SCF protein fragments. The DNA sequences are useful for effecting the large scale synthesis of SCF by a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Preparing a human stem cell factor (SCF) polypeptide, useful for treating hematopoletic disorders, e.g., aplastic anemia, comprises growing host cells transformed or transfected with DNA encoding a human SCF.
                                                                                                                                    Human stem cell factor, SCF, protein (bladder cancer).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Zsebo KM, Bosselman RA, Suggs SV, Martin FH;

cc variety of recombinant techniques or for generating new and useful viral and circular plasmid DNA vectors, new and useful transformed and circular plasmid DNA vectors, new and useful transformed and transfected proKaryotic and eukaryotic host cells, and new and useful competed for cultured growth of such host cells, and new and useful competed for cultured growths. The second is several solutions of second is related products. The DNA sequences are also useful as competed probes in isolating human genomic DNA encoding SCF, in methods of protein synthesis, in genetic therapy in humans and other mammals, and competed solutions of second in developing transgenic mammalian species which may serve as eukaryotic in developing transgenic mammalian species which may serve as eukaryotic consetul for treating haematopoietic disorders, e.g., aplastic anaemia, consetul for treating haematopoietic disorders, e.g., aplastic anaemia, consecutors in metastatic carcinoma, acute leukaemia, multiple myeloma, contenter-Siw disease, lymphoma, Gaucher's disease, Niemann-Pick disease, Letterer-Siw disease, refractory erythroblastic anaemia, pick disease, congestive splenomegaly, Kala awar, sarcoidosis, primary splenic pancytopaenia, miliary tuberculosis, disseminated fungus disease, Confidentia, malaria, vitemin B 12 and folic acid deficiency, splenic pancytopaenia, malaria, vitemin B 12 and folic acid deficiency, pyridoxine deficiency, Diamond Blackfan anaemia, and hypopigmentation disorders such as piebaldiam and vitiligo. The SCF are also useful for treating neurological damage, infertility states, intestinal damage cresulting from irradiation or chemotherapy, and AIDS. SCF is also deficiency, sequence is a human SCF protein sequence (partial or full length).

```
This invention relates to a novel method of inhibiting or treating a tumour, metastasis or infectious lesion in a subject which comprises administrating into or near a site of a tumour or infectious lesion in a cubject an antigen presenting cell and an immunostimulatory cytokine or a nucleic acid encoding the cytokine. The invention may be useful for the production of compounds with a cytostatic or vulnerary activity acting as cumunomodulators. The method is useful in inhibiting or treating a cumunur, metastasis or infectious lesion in a subject, where the size of the tumour, metastasis (where number is also decreased) or infectious consistence in its selected from metanoma, hepatoma, adenocarcinoma, colorectal cancer, basal cell cancer, read and neck cancer, renal cell cancer, pancreatic cancer, pulmonary cancer, nearly cancer, pancreatic cancer, pulmonary cancer, cervical cancer, ovarian cancer and breast cancer, gastric cancer, prostrate.
                                                                                                                                                                                                                                                                                                 Inhibiting or treating a tumor, metastasis or infectious lesion comprises administering into or near site of a tumor or infectious lesion an antigen presenting cell and an immunostimulatory cytokine or a nucleic acid encoding the cytokine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MKKTQTWILICIYLQLLLFNPLVKTEGICRNRVTNNVKDVTKLVANLFKDYMITLKYVPG

The invention relates to a stem cell factor (SCF) such as non-naturally-
cocurring SCF having an amino acid sequence sufficiently duplicative of
that of naturally occurring SCF to allow possession of a haematopoietic
biological activity of naturally occurring stem cell factor, or naturally
cocurring SCF. Also included are an isolated DNA sequence for use in
securing SCF. Also included are an isolated DNA sequence for use in
securing SCF. Also included are an isolated DNA sequence for use in
securing SCF. Also included are an isolated DNA sequence cell of non-
aturally occurring SCF, a prokaryotic or eukaryotic host cell
cransformed or transfected with the DNA, a polypeptide product of the
captression of the DNA in a prokaryotic or eukaryotic host
captression of non-naturally occurring SCF, a DNA sequence coding for a
polypeptide fragment or polypeptide analogue of naturally-occurring stem
cell factor, a biologically functional plasmid or viral DNA vector
including the DNA sequence above, a prokaryotic or eukaryotic host cell
stably transformed or transfected with the DNA, a polypeptide having part
or all of amino acid sequence encoded by composite nucleic acid sequence
cof human SCF cDNA sequence obtained from HT1080
cfibrosarcoma cell line, or human SCF cDNA sequence obtained from 537 bladder
carcinoma cell line (and having one or more of in vitro biological
cactivity of naturally-occurring stem cell factor, and an antibody
specifically binding SCF. SCF. is useful for traating leukopaenia,
chrombocytopaenia, anaemia, and enhancing engraffment of bone marrow
during transplantation in a mammal. SCF is useful enhancing bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel stem cell factor (SCF) such as non-naturally-occurring SCF or naturally occurring SCF, useful for treating leukopenia, thrombocytopenia, anemia, and enhancing engraftment of bone marrow during

cc recovery in treatment of radiation, chemical, or chemotherapeutic induced bone marrow aplasia or myelosuppression which involves treating patients with therapeutically effective doses of SCF. SCF is useful for treating acquired immune deficiency, neoplasia, nerve damage, infertility, intestinal damage, and a myeloproliferative disorder. SCF is useful for transfecting early haematopoietic progenitor cells with a gene which continving early haematopoietic progenitor cells with SCF, and transfecting a gene to a mammal which involves culturing early continued cells with a gene. SCF is useful for transfecting a gene to a mammal which involves culturing early continued cells with a gene. SCF is useful for treating various haematopoietic disorders, aplastic anaemia. CC myelofibrosis, myelomiatering the cultured cell to the mammal. SCF is useful for treating various haematopoietic disorders, aplastic anaemia, myelomiatering the cultured cell to the mammal. SCF is myelofibrosis, myeloma, Hodgkin's disease, lymphoma, Gaucher's anaemia. SCF is useful for enhancing the efficiency of gene therapy, for enhancing haematopoietic recovery after acute blood loss. The present

The present invention relates to a method (M1) for stimulating proliferation of melanocyte cells in a human. (M1) involves administering proliferation of melanocyte cells in a human. (M1) involves administering to proliferation of melanocyte cells, and optionally a carrier, to that stimulates growth of melanocyte cells, and optionally a carrier, to the thuman. The SCP is covalently conjugated to a water soluble polymer e.g. polyethylene glycol. Also, the SCP is co-administered with one or more other cytokines. SCP is also able to stimulate the growth of primitive progenitors such as early hematopoietic progenitor cells that are capable of maturing to erythroid, megakaryocyte, granulocyte, creating promerries and macrophage cells, and non-hematopoietic stem cells such as collerating bone marrow regeneration, and in augmenting T cell accelerating bone marrow regeneration, and in augmenting T cell production. (M1) is useful for treating seem cells dusc to toxic, cradiant or immunological injury. (M1) is useful in treating AIDS, aplastic anemia, paroxysmal nocturnal hemoglobinuria, myelofibrosis, congestive splenomegaly, Kalaazar, sarcoidosis, primary of aplanic pancytopenia, disseminated fungus disease, fulminating septicemia, malaria, vitamin B12 and folic acid deficiency disease, pyridoxine deficiency disease, and hypopigmentation disorders such as competicemia, malaria, vitamin B12 and folic acid deficiency disease, intestinal damage resulting from irradiation or chemotherapy, and stem cell myeloproliferative disorders such as chronic myelogenic progenitors in syngeneic, allogeneic or autologous cell myelopotetic progenitors in syngeneic, allogeneic or autologous cerly hematopoletic progenitors in syngeneic, allogeneic or autologous therapy. The present sequence was used to illustrate the inventencent continued and acute leukemia, therapy. The present sequence was used to illustrate the inventencent continued and acute leukemia and acute leukemia malania and acute leukemia, and seem continued and acute leukemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Stimulating proliferation of melanocyte cells in human, involves administering stem cell factor polypeptide or its biologically active fragments stimulating growth of melanocyte cells, and optionally carrier,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         coding sequence for this protein was obtained from the 5637 bladder carcinoma cell line.

Street cell factor precursor - chicken
C; Species: Gallus gallus (chicken)
C; Species: 24-Feb-1994 #sequence_revision 24-Feb-1994 #text_change 09-Jul-2004
C; Jaccession: JN0637
R; Zhou, J.H.; Ohtaki, M.; Sakurai, M.
Gene 127, 269-270, 1993
A; Title: Sequence of a cDNA encoding chicken stem cell factor.
A; Reference number: JN0637; MUID: 93273244; PMID: 7684722
A; Aritle: Sequence of a cDNA encoding chicken stem cell factor.
A; Residues: 1-287 cano.
A; Residues: 1-287 cano.
A; Residues: 1-287 cano.
A; Residues: 1-287 cano.
C; Superfamily: mouse mast cell growth factor
C; Keywords: growth factor; transmembrane prodicted cano.
F; 1-25/Domain: signal sequence #status predicted cano.
F; 226-281/Product: stem cell factor #status predicted cano.
F; 226-284/Domain: transmembrane #status predicted cano.

```
Isold=P21533-2; Sequence=VSP 006022;
DEVELOPMENTAL STAGE: Acts in the early stages of hematopoiesis.
DEVELOPMENTAL STAGE: Acts in the early stages of hematopoiesis.
PTM: A soluble form is produced by proteolytic processing of isoform 1 in the extracellular domain.
SIMILARITY: Belongs to the SCF family.

A Murray J.D., Bowling A.T.;
A primary Human-Horse comparative gene map.";
Submitted (JAN-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).

-!- SUBGLIULAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).

-!- TYM: A soluble form (By similarity).

-!- FTM: A soluble form is produced by proteolytic processing of the extracellular domain (By similarity).

-!- SIMILARITY: Belongs to the SCF family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              KDLKKSFKSPEPRLFTPEEFFRIFNRSIDAFKDF-VVASETSDCVVSSTLSPEKG----
                                                                      DNA Seq. 6:233-237(1996).

-I- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
-I- SUBGELLULAR LOCATION: Type I membrane protein (isoforms 1 and 2). Also exists as a secreted soluble form (isoform 1 only) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MKKTQTWILTCIYLQLLLFNPLVKTEGICRNRVTNNVKDVTKLVANLPKDYMITLKYVPG

PTM: A soluble form is produced by proteolytic processing of
isoform 1 in the extracellular domain (By similarity).
POLYMORPHISM: The roan locus is responsible for the coat
coloration of Belgian Blue and Shorthorn cattle. The solid-colored
and white animals are homozygotes, and the roan animals, with
intermingled colored and white hairs, are heterozygous. The roan
phenotype is due to the Asp-218 mutation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STRAIN=Belgian Blue;

The missense mutation in the bovine MGP gene is associated with the roan phenotype in Belgian Blue and Shorthorn cattle.";

Mamm. Genome 10:710-712(1999).

I. FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).

-!-SUBGELLUIAR LOCATION: Type I membrane protein (isoforms 1 and 2).

Also exists as a secreted soluble form (isoform 1 only) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Submitted (WOV-2000) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).

-!-SUBCELIULAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).
                                                                                                                                                                                           Q9SN18; Q9SNN5;

-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins.
-!- SUBUNIT: Homodimer, non-covalently linked (Probable).
-!- SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1 and 2). Also exists as a secreted soluble form (isoform 1 only) (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=91004218; PubMed=2208278; DOI=10.1016/0092-8674(90)90300-4; Zsebo K.M., Wypych J., McNiece I.K., Lu H.S., Smith K.A., Karkare S.B., Sachdev R.K., Yuschenkoff V.N., Birkett N.C., Williams L.R., Satyagal V.N., Tung W., Bosselman R.A., Mendiaz B.A.,

Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins. Covalently linked (Probable) SUBCELULAR LOCATION: Type I membrane protein (isoforms I and 2). Also exists as a secreted soluble form (isoform I only) (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ISOId=P20826-2; Sequence=VSP 006023;
-1- DEVELOPMENTAL STAGE: Acts in the early stages of hematopoies:
-1- FTM: A soluble form is produced by proteolytic processing of isoform 1 in the extracellular domain.
-1- SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28;

SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
SUBUNIT: Homodimer, non-covalently linked (Probable).
SUBCELLULAR LOCATION: Type I membrane protein. Also exists as a secreted soluble form (By similarity).
                                                                                                                                                                                                                                                                                                   SCF_SHEEP

Submitted (MAR-2003) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
-!- SUBUNIT: Homodimer, non-covalently linked (By similarity).
-!- SUBCELLULAR LOCATION' Type I membrane protein (isoforms 1 and 2) Also exists as a secreted soluble form (isoform 1 only) (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SCF (Fragment).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 8

US-09-949-016-9392

Sequence 9392, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WISH HUMAN DISEASE, OF DETECTION AND USES THEREOF

FILE REPERENCE: CLO01307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 63,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
